

Emoji Font Test

compiler diagnostic

2026-09-15

Version 1 (September 2026)

Raw emoji direct input, four codepoints (as used in the assessment status matrix):

□ □ □ □

If all four render in color below the heading, the TEXMFHOME emoji fix (`compile-all.zsh` installing Noto Color Emoji and calling it by family name) works. If they render as empty squares, the `emoji` package still cannot use the font; in that case the PNG route (as in `DOCS_ASSESSMENT.md`) remains the fallback. Delete this file once confirmed.

Run with: `zsh /Users/joko/Git/ai/IT/scripts/compile-all.zsh "/Users/joko/Git/BFRep/(3)BeyondHulten/docs/archive`
